

Established for over 35 years, we have focused exclusively on providing unbeatable office technology, and although we are a truly national operation, our success has been forged around our unique network of local offices providing on-the-spot response, rapport and reliability.

Business Phone Systems

In a world that never sleeps, effective communication counts. Any lack of ability or downtime when it comes to your business telephony can have serious operational consequences and significant financial implications. If you're not available, you can be sure your competitors will take advantage.

From softphone (soft client telephone) to mobile apps, IP telephony, video, conference and complete unified communications (UC), our phone systems are designed around your unique requirements, ensuring you are always in the best position to communicate and interact with the people that need you.

Seamlessly integrated into your environment, we work alongside the best and most respected suppliers, providing telephony solutions that increase employee efficiency, improve your customer experience, and even reduce your communication costs.

Making a difference

With a host of advanced business phone features available within our wider UC offering, your employees will be better connected with their colleagues and customers, with access to a number of additional features including extension dialing, ring groups, call recording, auto attendant and internet faxing.

Altodigital's primary aim is to provide a telephony solution that makes a difference – to your workforce, your customers and to your efficiency levels.

Telephony that supports your needs

Your business needs to be investing in robust telephony systems that ensure your employees can be encouraged to work together more efficiently, no matter where they are, by using features like web conferencing and video meetings.

With a host of clever features at your fingertips, your business has everything it needs to manage and create new channels for communication that will never fail.

Unified Communications

The presence of a single UC system means that we can offer seamless mobile access and superior global reach to connect all your people, locations and devices.

You will be able to hold cloud-hosted, interactive video meetings so you can see and engage with your customers, make key decisions and deal with technical issues. The software also allows you to share content and control/share meeting responsibilities more effectively.

Our advanced mobile apps ensure all devices ring at the same time, are compatible with both Apple/Android devices, have cellular network/WiFi capabilities and video call functionality.

Communication Solutions

Your business has to maintain constant and effective communication and connectivity – with your employees, agents, customers and suppliers. Any loss of efficiency can impact on your bottom line. Use our intelligent, technology-driven solutions to ensure your business keeps pace with today's global demands.

The Benefits

- More opportunities for collaboration and exchange
- Minimise downtime with proven technology
- Improve your customer experience
- Reduce communication inefficiencies
- Keep pace with customer expectations
- Boost employee productivity
