

Open up possibility with the cloud.

Every digital transformation journey is unique, with its own challenges. The one constant? Every business needs to stay nimble and secure, and employees need to be able to work from anywhere. But integration with existing systems and platforms can be tricky. How do you know if your data is safe and compliant? Where are the hidden risks?

IT Cloud Services has everything you need to enable remote services as seamlessly as possible. From understanding what features you need to connect mobile and distributed employees to staying ahead of what's next whilst easing the burden on IT, we make maximising all the cloud has to offer easy, safe and secure.

42% of workers would swap a portion of their pay for the ability to telecommute. On average they'd be willing to take a **6%** pay cut.¹

93% percent of businesses that suffer data loss for more than 10 days file for bankruptcy within one year.²

80% of technical leaders think having the right cloud skills will be important or critical to their digital transformation.¹

MAXIMISING FLEXIBILITY

With cloud computing and mobile workflow apps you can offer your employees the flexibility they need to enjoy the work-life balance that suits them — without any interruptions in productivity.

STRENGTHENING SECURITY

Lost laptops cost organisations billions of dollars. The cost of the loss of sensitive data is even greater. When your data is stored in the cloud, you can access it no matter what happens to the device. You can even remotely wipe data from lost laptops so it doesn't get into the wrong hands.

MAINTAINING YOUR COMPETITIVE EDGE

Wish there was a simple step you could take to become more competitive? The cloud gives everyone in your organisation access to enterprise-class technology. It also allows businesses of all sizes to act as fast as today's markets require. Pay-as-you-go service and cloud business applications enable you to lead and even disrupt your market while remaining lean and nimble.
