

The integrated foundation that the modern workplace is built on.

Virtualisation. Infrastructure and networking layers. Servers and storage. Firewalls. How do you make it all work together securely and seamlessly to ensure maximum uptime, security and availability without letting it consume your day or break your budget?

Turn to Xerox. We can design, scale and build the technology solution that gives you a flexible working environment with the agility and levels of threat protection and networking that are right-sized for your organisation.

47% of C-Suite executives report their organisation is advancing digital transformation across the enterprise.¹

53% say they're adopting gradually in silos or still evaluating their ability to digitally transform.¹

Where is your organisation? We'll meet you where you are to move your business forward at the pace that's right for you.

1. State of Digital Transformation, 2020

Work smarter. Achieve more. Collaborate better.

Digital transformation is imperative for moving business forward. But everyone is at different phases in their transformation journey. Our team of technical architect-led subject matter experts, including a dedicated delivery manager, meet you where you are to determine the solution that's right for your organisation.

INFRASTRUCTURE DESIGN AND BUILD

We'll start by crafting a cohesive technology roadmap for your organisation that optimises and builds upon your existing infrastructure whilst harnessing the right blend of future state options. This allows for complete flexibility and scalability for the future at a fixed price. You'll even get a dedicated delivery manager you can rely on.

ENTERPRISE WI-FI

To ensure internal connectivity within your location, we:

- Partner with trusted enterprise Wi-Fi leaders, including HPE Aruba Networks
- Utilise enterprise Wi-Fi survey tools, reporting and office analytics to create a solution with scalability, improved bandwidth utilisation and reduced network congestion
- Continually and tangibly track success of Wi-Fi deployment and prove usage levels and speeds via cloud-based management and analytics tools

MANAGED CONNECTIVITY

To keep employees connected wherever they are, we employ a range of fully managed solutions to do just that, including broadband, leased lines, PWAN and SDWAN.

DATA CENTRE SERVICES

Need hosting, automatic backup, failover connections or firewalls? We take care of that and more for organisations of all sizes, across many industries, with the means that work best for them. We provide Disaster Recovery, in partnership with Veeam, and are also experts in private, public and hybrid cloud models, and can offer nimble storage, power, security and cooling.

Our strategic partnerships ensure we deliver the right mix of technology for you.

Connectivity is the driving force behind how we work today.
