

Greet guests with a faster, simpler and safer way to sign in.

Your reception area is a key piece of real estate. The right decor can go a long way in creating a welcoming visitor experience and making a good first impression. But could something be missing? A fast, smooth and secure sign-in process.

Digital visitor management systems (VMS) used to be considered a nice-to-have novelty, rather than a business necessity. Now, however, they're a mission-critical tool — pen and paper logbooks have lost out to an increased need for privacy, security and efficiency.

SO LONG LOGBOOKS

First impressions are everything. Make a positive one with Concept Digital Sign In. Welcome guests with a modern, simple and secure check-in process. Contactless sign-in allows guests to check in straight from their smartphone by scanning a secure QR code. Signing in has never been this safe or fast.

The easy-to-use web-based portal allows you to manage multiple locations in one place, access a real-time view of data and pull reports as needed.

The best part? Everything you need to get started comes in one box — tablet, stand, badge printer and more. All you need to install it is a WiFi connection, so you can get up and running in no time.

And it gets even better. Cost efficiency is embedded into the software solution. The subscription includes the hardware, as well as a consultation and ongoing technical support. No upcharging or hidden fees. Plus, Concept Digital Sign In can help you automate manual tasks to reduce labour hours.

Health and safety is a top-of-mind concern for businesses, employees and visitors. Pen and paper logbooks are difficult if not impossible to thoroughly clean. Concept Digital Sign In devices can be easily sanitised. Staff and visitors can also take advantage of a completely contactless option.

The power to protect your people, premises and privacy.

Speed and security aren't mutually exclusive. Streamline sign-in and take the complexity out of compliance. Our software solution is fully GDPR compliant and ISO 27001 certified, so you can be confident that the privacy of your guests is always protected.

In addition to data, Concept Digital Sign In also helps to keep your building safe with capacity alerts, evacuation management and the ability to pre-register guests via email for an added layer of security. Contact tracking is simple. The web portal makes it easy to see exactly who came into contact with whom and when.

KEY FEATURES

Manage Multiple Locations —

Access real-time views from a single web-based portal.

Fully Customisable —

Easily customise the information you require from each visitor.

Sign-In Tap —

Employees can sign in and out with a simple tap of their personal ID card, making it simple for HR and Finance to monitor hours.

Alert Hosts —

Let hosts know when guests have arrived via text or email.

All in One —

Pay-as-you-go software subscription includes everything you need, including a consultation, tablet, wireless badge printer, secure desks or floor stand and technical support.

ADDITIONAL CAPABILITIES

• Make It Yours —

Add your logo and branding for a more memorable sign-in experience.

• Email Invitations —

Pre-register guests for faster, safer sign-in. Add directions, calendar appointment download and a personal QR code.

• Terms and Policies —

Ensure visitors read and accept important information and company regulations.

• Visitor Photos —

Use with the built-in camera to take visitor photos and print badges instantly. Visitor photos are stored securely and can even be sent to the host for smoother introductions.

• Multilingual Support —

Greet visitors with native translation for faster check-in and a welcoming first impression.

• Integration —

Concept Digital Sign In can be integrated with other systems, including Azure, Slack and Teams.

• Capacity Alerts —

Receive a notification when capacity limits are reached.

• Evacuation Management —

Access evacuation lists immediately through the mobile companion app.

• Easy Installation —

Hit the ground running and get up to speed in no time. All that's needed is a WiFi connection.
